## About Me

Software Engineer with strong experience in full stack development and project leadership. Passionate about **Web Development**, building scalable, and real-world solutions. Led academic and freelance projects applying engineering best practices, agile methodologies, and CI/CD tools. Focused on delivering efficient systems that bring real value to users and organizations.

---

## Professional Experience

### Fronted Developer

*Luminik (Freelance)*

**May 2025 – Present**

A small aromatherapy business needed a digital presence to promote their products.

- Design and build a responsive landing page to showcase their brand and offerings.
- Developed a modern, mobile-friendly landing page using HTML, CSS, and Bootstrap, focusing on clean design and user experience.

Delivered a fully responsive website that helped the business establish its online identity and begin its digital marketing strategy.

## **Full Stack Developer | IA Developer**

*Intelisis ERP (Freelance)*

**Nov 2024 – Apr 2025 (6 months)**

The company required an intelligent system to analyze and manage user comments for decision-making and reporting.

- Build a smart tool capable of classifying and filtering customer feedback.
- Developed a system using AI and NLP to classify comments (positive, negative, neutral), detect offensive language, and generate automated monthly reports and dashboards.

Streamlined the comment analysis workflow, enabling real-time monitoring of user sentiment and improving strategic reporting for client satisfaction.

---

## **Full Stack Developer | Project Manager**

*UniNet (Field Engineer)*

**Feb 2025 – July 2025**

Worked on telecommunications sites for enterprise and government clients, ensuring proper installation and functionality of network infrastructure.

- Install and configure key hardware components in the field.
- Installed routers, modems, and UPS devices; configured Cisco equipment and ensured optimal connectivity by applying technical standards and protocols.

Helped maintain reliable telecom operations across 15+ locations, resolving field incidents efficiently and reducing downtime.

---

## **Web Designer & Front-End Developer | Project Manager**

*UniNet (Freelance)*

**Jan 2024 – Present**

An English language school needed a digital platform to promote its services and attract new students.

- Create a visually appealing landing page that clearly communicated their offerings.
- Designed custom logos, created engaging visuals, and developed a modern, responsive landing page using HTML and CSS.

Delivered a unique and visually compelling website that increased the school's online visibility and helped expand its audience.

## Education

### Computer Systems Engineering

Instituto Tecnológico de Mérida

2022 – Present

- Former member of the AAAIMX software division
  - 2nd place at Hackathon 3.0 (2025) with an AI-based solution for Intelisis ERP
-
